Objectives

After completing this lesson, you should be able to:

- Detect and repair database corruption
- Use the Automatic Diagnostic Repository
- Analyze instance recovery with ADRCI
- Use Data Recovery Advisor

14 - 2

Reducing Problem Diagnosis Time

Investigation & Planning

Oracle tools for data repair include:

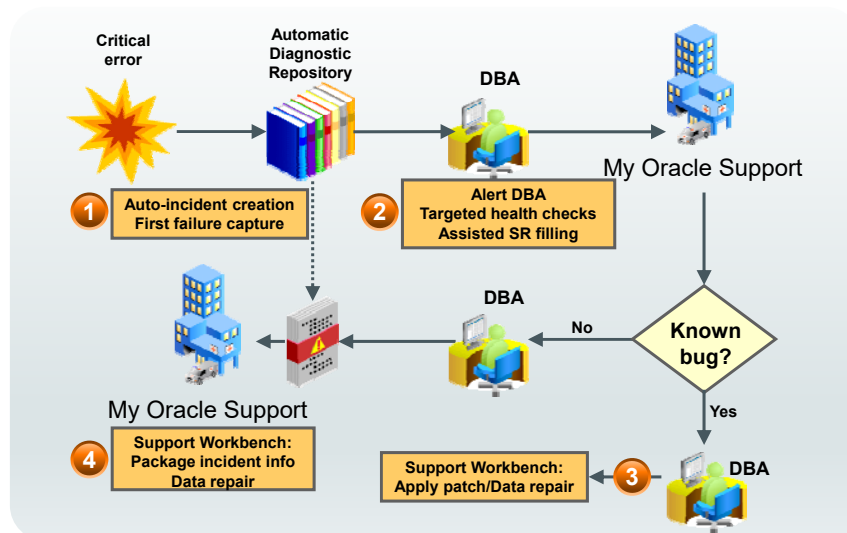

- RMAN for physical media loss or corruptions
- Flashback for logical errors
- Data Guard for physical problems
- **Data Recovery Advisor** addresses:
 - Problem diagnosis (choosing the right solution can be error prone and time-consuming)
 - Incorrect choices (errors more likely during emergencies)

14 - 5

ADR Command-Line Tool (ADRCI)

- ADRCI provides interaction with ADR from an operating system prompt.
- Using ADRCI, you can view diagnostic data within the ADR.

```
$ adrci
ADRCI: Release 12.1.0.1.0 - Production on Thu Nov 29 21:15:27 2012
Copyright (c) 1982, 2012, Oracle and/or its affiliates.
ADR base = "/u01/app/oracle"
ADRCI>
ADRCI> show incident
ADRCI> set editor gedit
ADRCI> show alert
. . .
ADR Home = /u01/app/oracle/diag/rdbms/eml2rep/eml2rep:
*****
INCIDENT_ID PROBLEM_KEY      CREATE_TIME
-----
4985        ORA 4031      2012-11-21 00:57:43.823000 +00:00
5161        ORA 4031      2012-11-21 00:58:17.284000 +00:00
2 incident info records fetched

14 - 7

Data Recovery Advisor

- Fast detection, analysis, and repair of failures
- Minimizing disruptions for users
- Down time and runtime failures
- User interfaces:
 - EM GUI interface (several paths)
 - RMAN command line
- Supported database configurations:
 - Single-instance
 - Not RAC

14 - 8

Data Recovery Advisor

Reducing down time by eliminating confusion:

14 - 9

Data Failure: Examples

- Not accessible components, for example:
 - Missing data files at the OS level
 - Incorrect access permissions
 - Offline tablespace and so on
- Physical corruptions, such as block checksum failures or invalid block header field values
- Logical corruptions, such as inconsistent dictionary, corrupt row piece, corrupt index entry, or corrupt transaction
- Inconsistencies, such as control file is older or newer than the data files and online redo logs
- I/O failures, such as a limit on the number of open files exceeded, channels inaccessible, network or I/O error

14 - 10

Data Recovery Advisor RMAN Command-Line Interface

RMAN Command	Action
LIST FAILURE	Lists previously executed failure assessment
ADVISE FAILURE	Displays recommended repair option
REPAIR FAILURE	Repairs and closes failures (after ADVISE in the same RMAN session)
CHANGE FAILURE	Changes or closes one or more failures

Listing Data Failures

The RMAN **LIST FAILURE** command lists previously executed failure assessment:

- Including newly diagnosed failures
- Removing closed failures (by default)

Syntax:

```
LIST FAILURE
[ ALL | CRITICAL | HIGH | LOW | CLOSED |
  failnum[,failnum,...] ]
[ EXCLUDE FAILURE failnum[,failnum,...] ]
[ DETAIL ]
```

Advising on Repair

The RMAN `ADVISE FAILURE` command:

- Displays a summary of input failure list
- Includes a warning, if new failures appeared in ADR
- Displays a manual checklist
- Lists a single recommended repair option
- Generates a repair script (for automatic or manual repair)

```
. . .  
Repair script:  
  /u01/app/oracle/diag/rdbms/orcl/orcl/hm/reco_29791  
  28860.hm  
RMAN>
```

Executing Repairs

The RMAN `REPAIR FAILURE` command:

- Follows the `ADVISE FAILURE` command
- Repairs the specified failure
- Closes the repaired failure

Syntax:

```
REPAIR FAILURE  
[USING ADVISE OPTION integer]  
[ { {NOPROMPT | PREVIEW}}...]
```

Classifying (and Closing) Failures

The RMAN `CHANGE FAILURE` command:

- Changes the failure priority (except for `CRITICAL`)
- Closes one or more failures

Example:

```
RMAN> change failure 5 priority low;
List of Database Failures
=====
Failure ID Priority Status      Time Detected Summary
-----
5          HIGH      OPEN        20-DEC-18      one or more datafiles are missing
Do you really want to change the above failures (enter YES or NO)? yes
changed 1 failures to LOW priority
```

14 - 15

Data Recovery Advisor Views

Querying `V$` views:

- `V$IR_FAILURE`: List of all failures, including closed ones (result of the `LIST FAILURE` command)
- `V$IR_MANUAL_CHECKLIST`: List of manual advice (result of the `ADVISE FAILURE` command)
- `V$IR_REPAIR`: List of repairs (result of the `ADVISE FAILURE` command)
- `V$IR_FAILURE_SET`: Cross-reference of failure and advice identifiers

14 - 16

Summary

In this lesson, you should have learned how to:

- Detect and repair database corruption
- Use the Automatic Diagnostic Repository
- Analyze instance recovery with ADRCI
- Use Data Recovery Advisor
